

## Apprenticeship Opportunities 2020 – Electricians SVQ Level 3

Founded by David Henry in June 2000 to provide support to customers in the marine industry, DH Marine quickly developed a reputation for providing highly knowledgeable people who would go the extra mile to help customers out of a fix when the unexpected happened.

Today DH Marine provides the same high level of support to a wide variety of customers in the industrial, commercial, marine, aquaculture and oil & gas industries across Shetland and beyond.

We are proud of our achievements and recognise that our future success depends on continuing to attract and recruit the best talent available, which is where you come in! If you are a keen and enthusiastic individual, have a 'can do' attitude and a strong desire to succeed then we want to hear from you.

Please send a handwritten letter containing a brief description of why you want to apply, details of any skills or ability you may already have, together with any other relevant information such as hobbies, projects, assignments etc. Please address your letter to:

Helena Mackay, DH Marine (Shetland) Limited, Marina Business Park, Gremista, Lerwick, ZE1  
OTA Email: [helena@dhmarine.co.uk](mailto:helena@dhmarine.co.uk)

The 4 year apprenticeship consists of a combination of college hours and on the job experience, leading to a final FICA test and an SVQ/NVQ level 3 in Electrical Installation.

Note: It is a pre-condition of an apprenticeship offer that you must have passed the Scottish Electrical Charitable Training Trust (SECTT) Pre-employment Assessment. To do this you must first register with SECTT, see [www.sectt.org.uk](http://www.sectt.org.uk) and follow the instructions.

On a typical day at DH Marine, you could find yourself working alongside our experienced engineers to:

- diagnose and repair faults on an oil & gas support vessel
- replace navigational and lighting electrical equipment on a quay
- commission electronic systems equipment on board a pelagic boat
- carry out testing and maintenance on portable equipment, including ATEX rated fixtures and fittings

Abi is seen here fault finding on a ship's integrated alarm system. She joined us as an apprentice in 2015 and qualified as an electrician last year- congratulations to Abi, our first female sparky!
